DETAILED ACTION

Claim Objections

1. Claims 2, 4-5, & 11 are objected to because of the following informalities:

With respect to claim 2, "further comprising:" should be deleted.

With respect to claims 4-5, "further comprising:" should be replaced by "wherein".

With respect to claim 11, "filtering absorbing light" should read "filtering step absorbs light".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al 6,034,406.

With respect to claims 1, 6-7, & 12-13, Kobayashi et al disclose a photoelectric conversion device comprising photoelectric conversion elements (S11-S33) and light blocking filters (70, 80) to disable the photoelectric conversion elements and to impede the impinging of light onto the conversion elements (S11-S33). Kobayashi et al disclose the blocked elements to serve as correction elements (see abstract) to apply correction output signals.

With respect to claims 2 & 8, Kobayashi et al disclose light blocking filter (70) to substantially block light from impinging on the photosensor.

With respect to claims 3-5 & 9-11, Kobayashi et al disclose light blocking filter (80) to be partially transmissive to light (50%) (See column 11, lines 50-56).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Aswell et al 6,596,981 B1 and Bidermann et al 6,737,626 B1 disclose imaging sensors with light blocking elements.
